- Academic institutions conduct many workshops, seminars, technical events, and cultural programs throughout the year.
- In many cases, event announcements and registrations are handled manually or through scattered platforms.
- This creates confusion for students and extra administrative work for coordinators.
- A centralized portal is needed to display events, manage registrations, and maintain records efficiently.
- This project provides a full-stack web application for campus event management.
- It offers separate access for students and administrators.
- Students can view and register for events easily.
- Admins can create, manage, and monitor events through a secure dashboard.

PROBLEM STATEMENT

1
2
3
4
5
6
7
8
9

- Existing campus event handling is often manual, fragmented, and time-consuming.
- Students may miss event information or face difficulty during registration.
- Administrators may struggle to maintain participant lists and event records accurately.
- Manual methods can lead to duplicate entries, data inconsistency, and poor tracking of capacity.
- There is no single system to manage users, events, and registrations together.
- Hence, a secure and automated campus event registration portal is required.
- The system should simplify event creation, registration, and monitoring.
- It should improve efficiency, accuracy, and accessibility for both students and admins.

OBJECTIVE(S)

1
2
3
4
5
6
7
8
9

- To design and develop a role-based web portal for campus event management and student registration.
- To implement secure authentication and database-driven tracking of users, events, and registrations.

PROPOSED SYSTEM

1
2
3
4
5
6
7
8
9

- The proposed system is a web-based campus event and registration portal.
- It provides separate student and admin login modules.
- Students can view available events and register for them online.
- Admins can create new events and delete outdated events.
- The system validates login credentials and controls access using roles.
- It prevents duplicate registrations and checks participant capacity.
- All data is stored in a MySQL database for consistency and reliability.
- This system reduces manual work and improves overall event coordination.

- Use this matter below the diagram:
- Input: Student and admin credentials, event details, registration requests.
- Processing: Frontend sends requests to Express APIs, backend validates users, roles, and event rules.
- Database: MySQL stores data in users, events, and registrations tables.
- Output: Event listings, successful registrations, student dashboard, and admin management screens.

7
8
9

- The user opens the Website.
- Here he finds 2 logins (Admin and student) so here he can log in as a student or admin.
- Students can browse events and register for them.
- Admins can create events, view registrations, and delete events.
- Each action is processed by the backend and stored in the database.
- The updated result is then shown on the respective dashboard.

TECHNOLOGIES USED

1
2

9

- Frontend: HTML5, CSS3, JavaScript
- Backend: Java, Spring Boot 3.2.5, Spring MVC
- Database: MySQL,Spring Data JPA
- Security: Spring Security, Session-based Auth
- Tools: Eclipse, Maven, Postman
- Requirements: Browser, JDK 21, MySQL Server

MODULE DESCRIPTION

Module 1: Authentication and User Management

Handles student registration, student login, admin login, JWT token generation, and role-based access.

Module 2: Event Management

Allows admins to create, view, and delete campus events with title, description, date, location, and capacity.

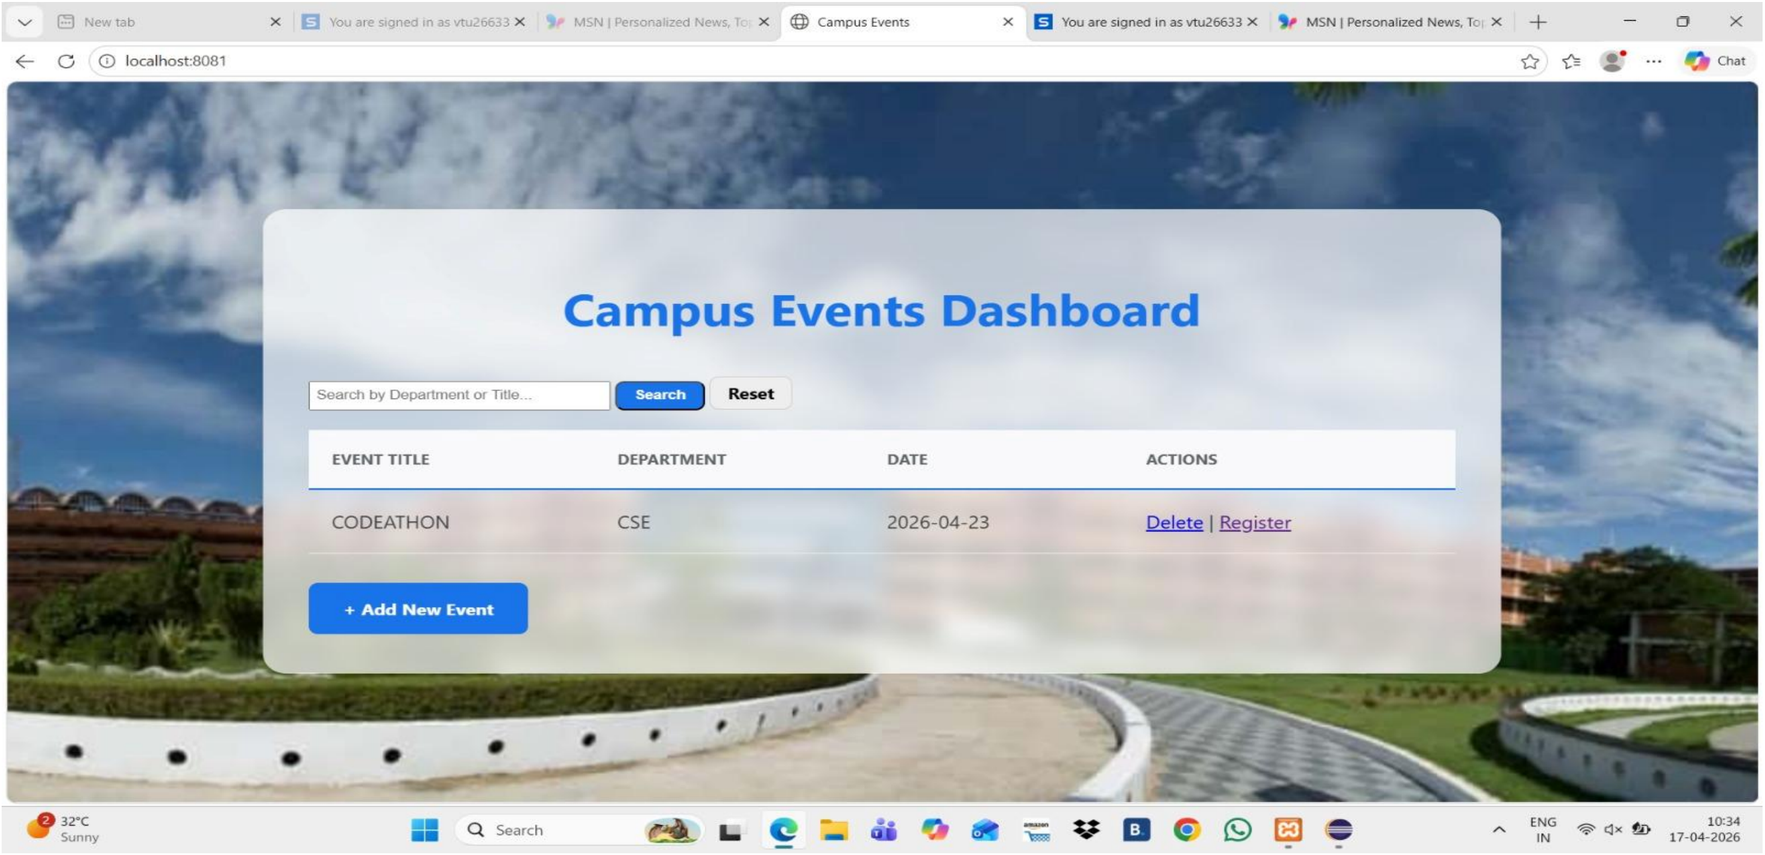
Module 3: Registration Management

Allows students to register for events, prevents duplicate registration, and checks event capacity.

Module 4: Database and API Integration

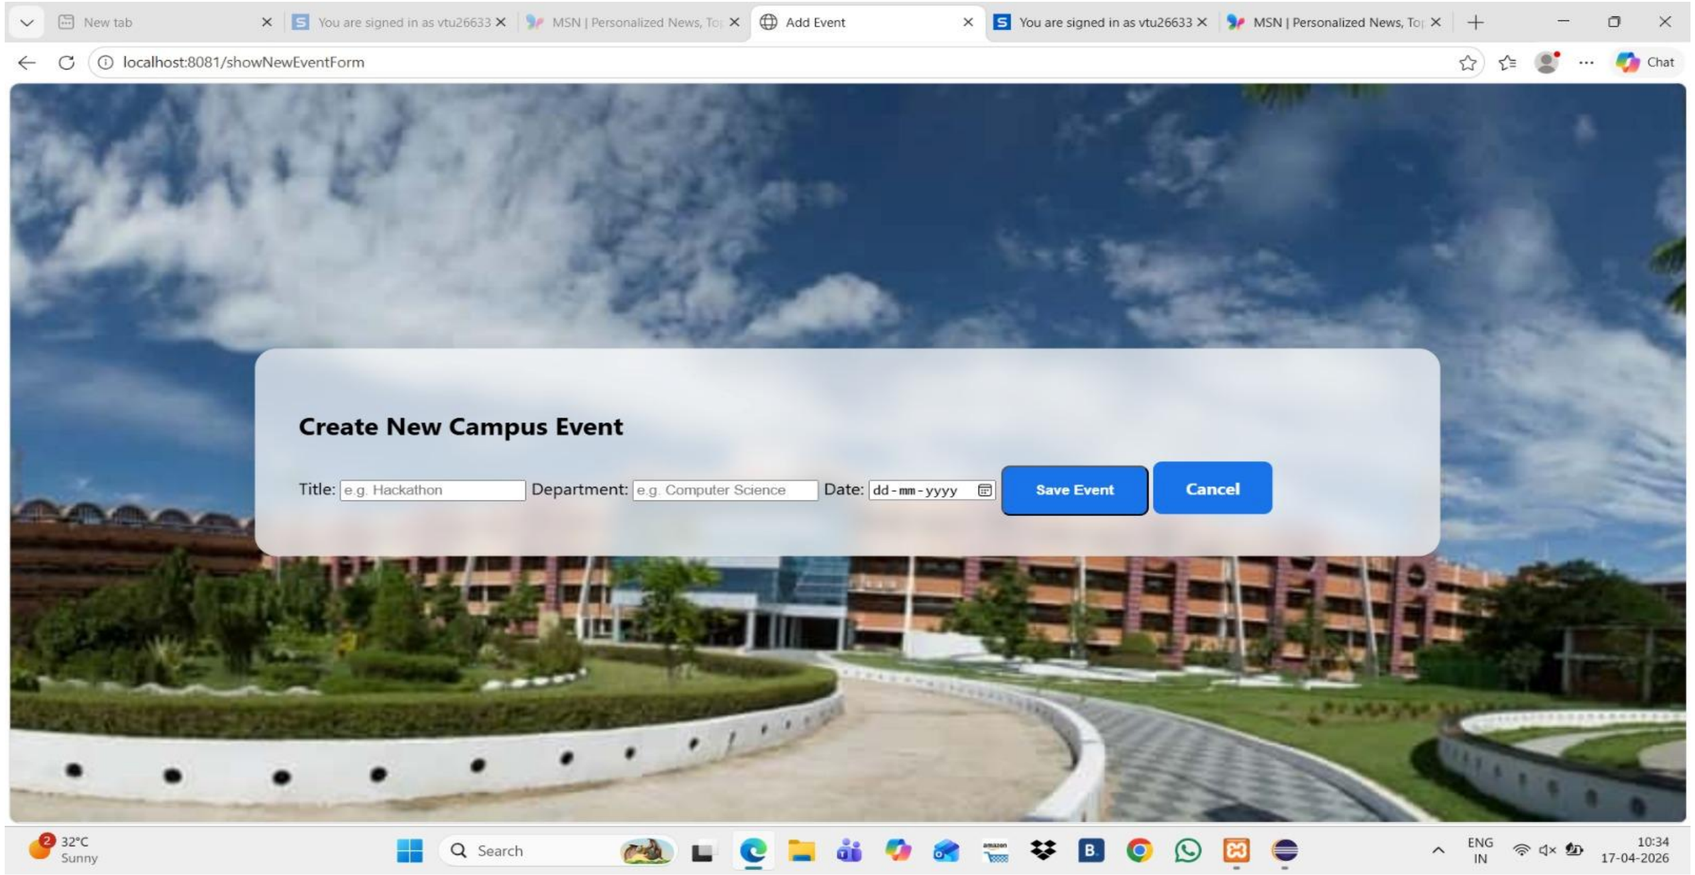
Connects frontend pages with backend APIs and MySQL tables for storing and retrieving data.

IMPLEMENTATION SCREENSHOTS



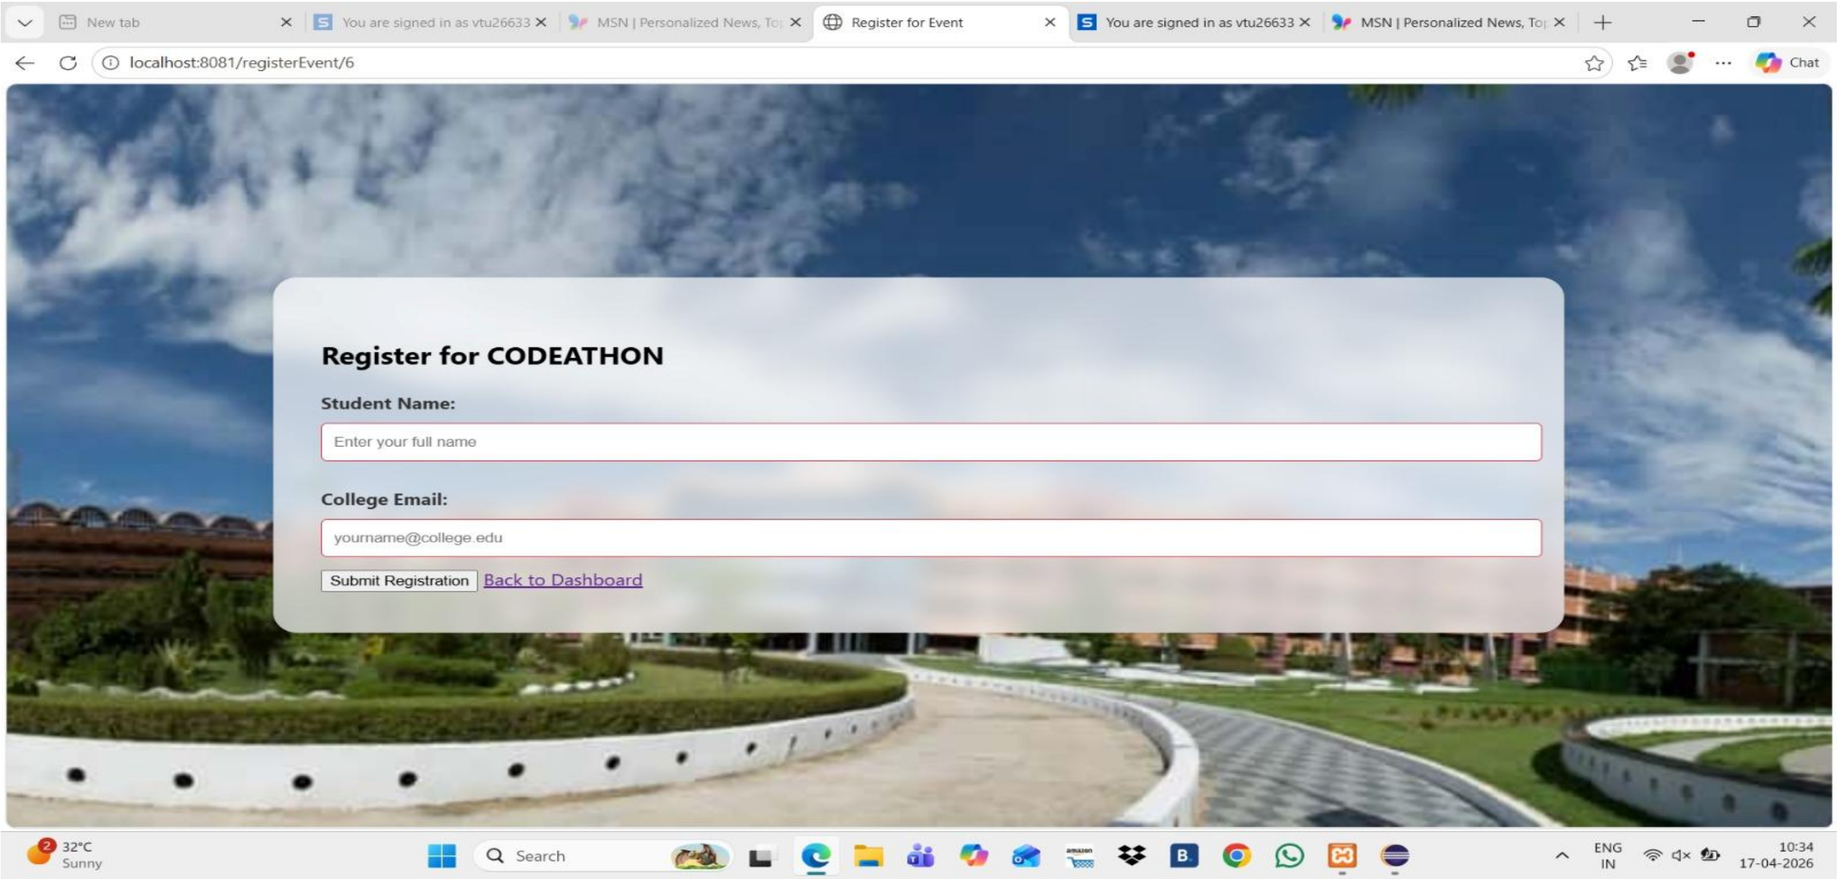
This is the landing page of the portal. It provides navigation for student login, registration, and admin login in a single interface.

IMPLEMENTATION SCREENSHOTS



This screen allows new students to create an account and existing students to log in securely using their credentials.

IMPLEMENTATION SCREENSHOTS



After login, students can view available campus events and register for them. The dashboard also shows their registered events.

IMPLEMENTATION SCREENSHOTS

The admin dashboard is used to, delete events, and view the list of students registered for each event.

ADVANTAGES & LIMITATIONS

1
2
3
4
5
6
7
8
9

Advantages:

- Centralized event management system
- Easy student registration process
- Role-based secure access
- Prevents duplicate registrations
- Database-backed storage improves accuracy

Limitations:

- Depends on server and database availability
- No email or notification feature
- No event update/edit feature
- Limited reporting and analytics
- Admin setup must be managed properly

Thank you
